

Dear All,

"At the last national Safety Council meeting this year in California, I discovered a sign printing product that has resulted in a significant cost saving. Please kindly note that we now rarely purchase expensive signs and are now making them in-house. The Max USA Bepop CPM-200GU Label Printing and Cutting Machine produces a bumper stock type interior/exterior self-adhesive product that can be affixed directly on a surface and/or onto an inexpensive metal blank. The easy to use software includes 1,400 existing sign templates and symbols including ANSI, Fire Protection, Wayfinding, Evacuation, etc. You can also print four color process images from your images and data files, import data from a CSV database and print barcodes. The integral plotter-cutter makes it possible to create custom shaped labels that fit your needs. The CPM-200GU allows you to realize huge cost savings and operational improvements by producing exactly what you want. Please feel free to come by and review this product with me or contact Steve Metcalf as follows: Phone:(800) 223-4293 Cell:(516) 423-9163 Email:smetcalf@maxusacorp.com Website: www.maxusacorp.com "
